PROFESSIONAL SUMMARY

QA Engineer with 5+ years of experience specializing in **test architecture, failure analysis, and intelligent automation systems**. Adept at identifying hidden system vulnerabilities before they reach production by combining **analytical reasoning, probabilistic thinking, and AI-assisted testing approaches**.

Known for reducing uncertainty in software systems, not just detecting bugs—by building **self-healing, scalable, and insight-driven test ecosystems**.

CORE COMPETENCIES

- Test Strategy Design & Risk Modeling
 - Automation Architecture (Scalable & Maintainable)
 - Failure Pattern Recognition & Root Cause Analysis
 - AI-Augmented Testing & Predictive QA
 - API & Distributed Systems Testing
 - Performance & Chaos Testing
 - CI/CD Quality Engineering
-

TECHNICAL STACK

Languages: Python, Java, JavaScript

Automation: Selenium, Playwright, Cypress

API Testing: Postman, REST Assured

Performance: JMeter, k6

CI/CD: Jenkins, GitHub Actions, Docker

Databases: MySQL, PostgreSQL, MongoDB

Others: Linux, Git, JIRA, TestRail

PROFESSIONAL EXPERIENCE

Senior QA Engineer

TechNova Systems Pvt Ltd | Pune, India

Jan 2023 – Present

- Architected a **modular automation framework** reducing execution time by 48% while improving reliability
 - Introduced **risk-based testing models**, cutting redundant test cases by 35% without loss of coverage
 - Built **AI-assisted defect prediction model**, identifying high-risk modules before release
 - Reduced escaped defects by **42%** through deep failure analysis and pattern tracking
 - Led cross-functional debugging sessions, solving complex production issues at system level
-

QA Engineer

InnoSoft Technologies | Mumbai, India

Jun 2020 – Dec 2022

- Designed automation scripts increasing regression efficiency by 60%
 - Performed **API and backend validation** for microservices architecture
 - Implemented **data-driven testing**, improving coverage across edge cases
 - Identified critical memory leak issue, preventing potential production downtime
-

KEY PROJECTS

Intelligent QA System (AI-Based Testing Framework)

- Developed a system that prioritizes test cases based on historical defect probability
 - Reduced unnecessary test execution by 30%
 - Improved release confidence using predictive analytics
-

Distributed E-Commerce Platform Testing

- Validated microservices communication under high load

- Performed chaos testing to simulate real-world failures
 - Ensured system stability under peak traffic conditions
-

EDUCATION

MCA (Cloud computing Testing)

Savitribai Phule Pune University

CERTIFICATIONS

- ISTQB Certified Tester
 - Advanced Selenium Automation
 - AI in Software Testing
-

ACHIEVEMENTS

- Reduced production incidents by **40%** through intelligent QA strategies
 - Built automation framework adopted across 3 teams
 - Recognized for solving critical system-level defects under time constraints
-

THINKING APPROACH (DIFFERENTIATOR)

- Views testing as **uncertainty reduction**, not checklist execution
 - Uses **first-principles thinking** to break complex systems
 - Focuses on **why systems fail**, not just *where*
 - Designs tests that simulate **real-world unpredictability**
-

STRENGTHS

- Deep analytical reasoning
- Systems thinking
- Precision and attention to edge cases
- High ownership mindset

LANGUAGES

English, Hindi, Marathi

Why this resume stands out:

- Moves beyond “testing” → shows **engineering mindset**
 - Uses **metrics + intelligence signals**
 - Highlights **AI + system thinking (rare skill combo)**
 - Speaks the language of **top product companies**
-

If you want next-level upgrade, I can:

- Turn this into a **FAANG-level resume**
- Add **portfolio projects (GitHub-ready)**
- Create a **LinkedIn profile that attracts recruiters automatically**
- Or tailor it for **high-paying US/remote jobs**
